

Master data and amplify impact with Vizient Data Management Platform

Broader access and greater flexibility of data technology and service solutions

At Vizient, our experts focus on harnessing today's expanding health care data landscape so members can achieve a fully integrated ecosystem that supports and accelerates supply chain processes, workflow and analytics-driven efficiencies — helping you improve performance and make more informed decisions, quickly.

We start with the data foundation that supply chain professionals know is essential — the connection between item master and contract management and core activities like standardization, value analysis and contract maximization.

Actionable data solutions for speed-to-value

Effective data management requires access and visibility into an arsenal of standardized data across each operational area that effects spend — financial, clinical and supply.

Vizient Data Management Platform helps by ensuring data quality and completeness. Using this actionable, analytics-driven data technology results in improving outcomes and lowering costs.

Put the power of enhanced data management services to work for you

High-quality data acts as the nervous system to core functions of supply chain operations. It's time to get ahead of the curve with a more flexible approach to manage an ever-increasing and complex collection of data.

Enhanced technology solutions

Vizient® Data Management Platform is a new solution that provides insight into your item master and submitted spend data. This insight enables you to find information and spend details on all products by accessing data through our industry-leading product master that houses product data beyond on-contract items.

Our data management technology includes member-guided enhancements that allow you to gain control over supply spend and quickly realize more value through:

- Improved search functionality via the Vizient product master
- Increased access to your item master and submitted spend data
- Enhanced attribution capability for GTIN, HCPCS, UNSPSC, contract, manufacturer, and other criteria
- Customized reports that connect with Vizient Catalog and cross-referencing product information

Enhanced support and custom data services

We offer flexible data services, created by experts to meet the needs of your health care operations in these key areas. Our all-in-one, services-led partnership levels — facilitated through a dedicated product adviser — range from automation to full turnkey offerings.

Supply and clinical data enrichment
