

PRODUCT DISRUPTION BRIEF

BD Hypodermic syringes (updated May 19)

Due to market events involving Chinese-manufactured syringes, BD made adjustments to their hypodermic product allocation in December 2024 to support inventory supply health for the U.S. market.

Current conditions

As of May 19, recovery has slowed for the below SKUs due to a brief factory shutdown relating to a suspicious package. See the letter [here](#).

BD Hypodermic adjustments to April allocation are included in table below. Hypodermic products continue to be manufactured and shipped daily for all codes to support healthcare needs. 3ML remains steady at reduced rate, but 5ML allocation is going down; both are offset by the suggestion to use 10 MLs as BD notes they have ample supply of those as alternative.
