

PRODUCT DISRUPTION BRIEF

Medline MS7512 Neurosponge recall

(Updated 05.07.26)

Disruption overview

Vizient was made aware that Medline, during an internal review, identified higher than expected endotoxin levels on Medline branded neurosponge products. Use of the product may result in health hazards that may necessitate medical or surgical intervention.

Current conditions

Based on these findings, Medline is proceeding with a voluntary recall from all customers who have purchased neuro-sponge products. To date, Medline has not received any post-market complaints regarding neuro-sponge endotoxin levels. The recall applies to kitted sterile and bulk non-sterile Medline branded neuro-sponge products. At this time there are no Medline branded alternatives, and there is no timeline when the recalled sponges will be returned to market.

See the Medline customer letter [here](#).

See the updated FDA Medical Devices Shortages List [here](#)

Suppliers are working to increase production. However, the recovery timeline remains uncertain, and supply conditions may not stabilize for some time.

Substitutes

Deroyal (Off contract supplier)

Medline SKU	DeRoyal SKU
NEUROSPNG02	30-154
NEUROSPNG05	30-054
NEUROSPNG06	30-055
NEUROSPNG07	30-056
NEUROSPNG09	30-057
NEUROSPNG11	30-058
NEUROSPNG13	30-059
NEUROSPNG14	30-060

- Currently on allocation and are only taking customers that will commit or sign a letter of commitment

- Due to ongoing supply constraints, ASC is only recommended for use in critical situations.
- Refer to the customer guide from ASC [here](#)
- All the above American Surgical Codes, except for 67-02, are also available as non-sterile.
- Contact Information: 1-800-343-0060/1-781-592-7200 OR email customerservice@americansurgical.com

Any proposed alternative should be thoroughly evaluated and approved in accordance with each organization’s internal quality, infection control, and clinical protocols, policies, and best practice standards.

Conservation Strategies

The FDA has released recommendations specific to health care providers experiencing interruptions or shortages of these products:

- **Prioritize essential clinical use:** Reserve neurosurgical patties, sponges and strips, as well as the procedural convenience packs, trays, and kits (kits) containing them for intracranial neurosurgical operations, delicate neural tissue protection where alternatives are unsuitable, and cases requiring high absorbency with minimal linting.
- **Implement conservation best practices:** Use neurosurgical patties, sponges and strips, and kits containing them, only when necessary, avoid routine or convenience use, open packages only as needed since unused devices cannot be used later, coordinate to minimize redundant use, and consider FDA-authorized alternatives appropriate to the specific surgical application when possible.
- **Manage inventory and communication:** Monitor daily usage and centralize storage and distribution of bulk and kitted devices, requisition inventory only for essential clinical use, diversify sources of supply for alternatives that are clinically appropriate for specific surgical applications, prioritize neurosurgical cases, avoid stockpiling, and escalate availability or safety concerns to leadership and supply chain teams.
