

The power of clarity:

Bringing data and performance improvement into focus

1 TRANSPARENCY:

View the performance of individual hospitals by name to benchmark against hospitals of your choice. At the same time, clearly see the risk-adjusted methodologies driving the benchmarking data, so you can be confident that the data is more transparent and trustworthy than any other source. Our data represents more than 6 million inpatients and 86 million outpatients.

90 Million +

3 BENCHMARKING:

Benchmark and report performance at the patient or physician level, or drill down into clinical populations using hundreds of advanced filters, including clinical lab values.

4 AD HOC REPORTING:

Customizable analyses to mine data your way, in addition to pre-built templates for an easy download.

5 REAL COSTING:

Built on a clinical understanding of supply utilization—not just cost. Supplies are put in the context of the patients on which they're used, allowing for a true cost evaluation of patient care. Information is compiled in a manner that's easily accessible—down to the service line, physician and patient levels.

2 QUALITY AND DEPTH OF DATA:

Link data and insights across quality, service lines, supply chain and finance.

6 INTEGRATED SYSTEMS:

Links procedural data with supply costs and clinical outcomes data to quickly and easily compare critical metrics such as supply cost per case, product utilization and case length.
